

Logan Cooksley

Apprentice Pipefitter Technician - Level 3

Logan started his pipefitter technician apprenticeship at TPG Maritime in January 2023

Describe your role and responsibilities

My role within my apprenticeship is as a mechanical fitter. Being so new to the environment and area of work I have been attempting and learning a variety of skills within everyone's job.

What's it like being an apprentice at tpgroup?

I have been at TPG Maritime for a few months and so far have been treated really well by all members within the company and have had the support from all my colleagues.

How does the Apprentice Scheme work?

I attend four days at the TPG Maritime site and perform regular work. I have a one-day release on a Thursday where I attend a PETA engineering site with many others following an engineering apprenticeship. There I learn the basic skills and specific skills required for my job and engineering in general.

What was your apprenticeship route?

I didn't want to follow a regular learning scheme because I wanted more practical time learning. And at an apprenticeship I am able to have a practical insight into to the world of engineering and have real experience within the role. This is something I had thought about during my time at school.

How easy is it to apply at TP Group?

Applying for the apprenticeship was really easy because, when finding it on the government website, I was put in contact with PETA who helped organise everything leading up my interview process.

What are your career ambitions?

I want to stay close to my current role but would be open to branching out and having more experience in other areas of engineering.

What do you enjoy doing outside work?

I am a very active person and spend a lot of time outdoors whether it's with friends or training.

What advice would you give to others?

In an apprenticeship it's not always about the on-the-job learning. It's about taking others' experiences and learning from those who have been where you are.
